

# End-tidal CO<sub>2</sub> use in pre-hospital trauma

Rio Grande Trauma Conference 2024

Patrick Popieluszko, MD

Everyone likes a  
new toy...

The literature of EtCO<sub>2</sub> and  
cardiac arrest goes back to  
at least 2010!<sup>1</sup>

Let's reignite the  
passion for  
EtCO<sub>2</sub>!

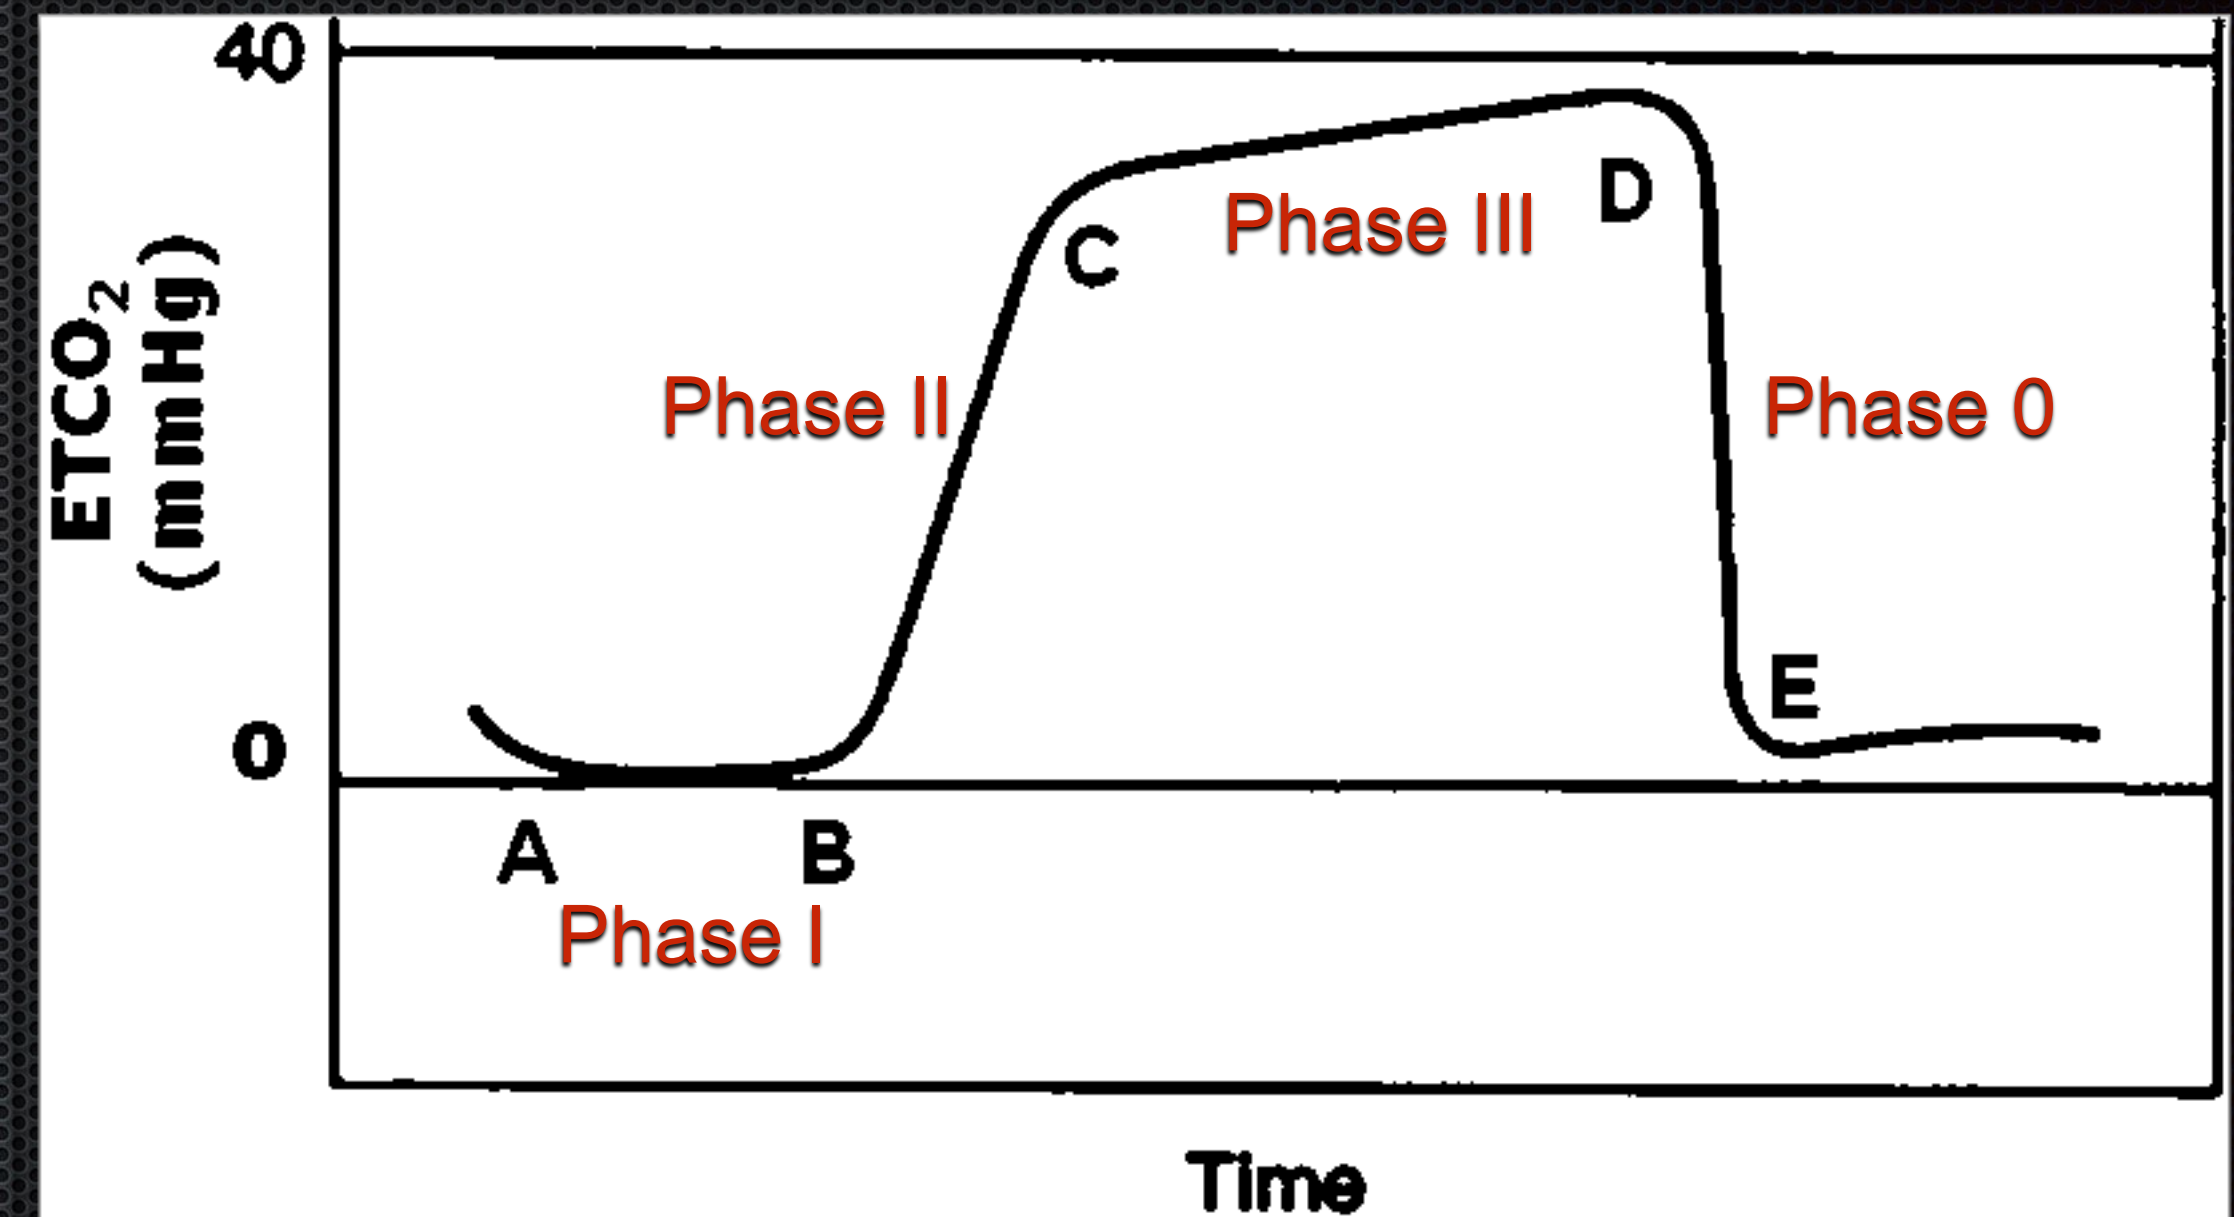

# Numbers and shapes

# A wave is a Cycle

- Inspiration
- Phase 0
- Exhalation:
  - Phase I
  - Phase II
  - Phase III

# Putting shapes to numbers

- The numbers from the last slide belong at....
- D

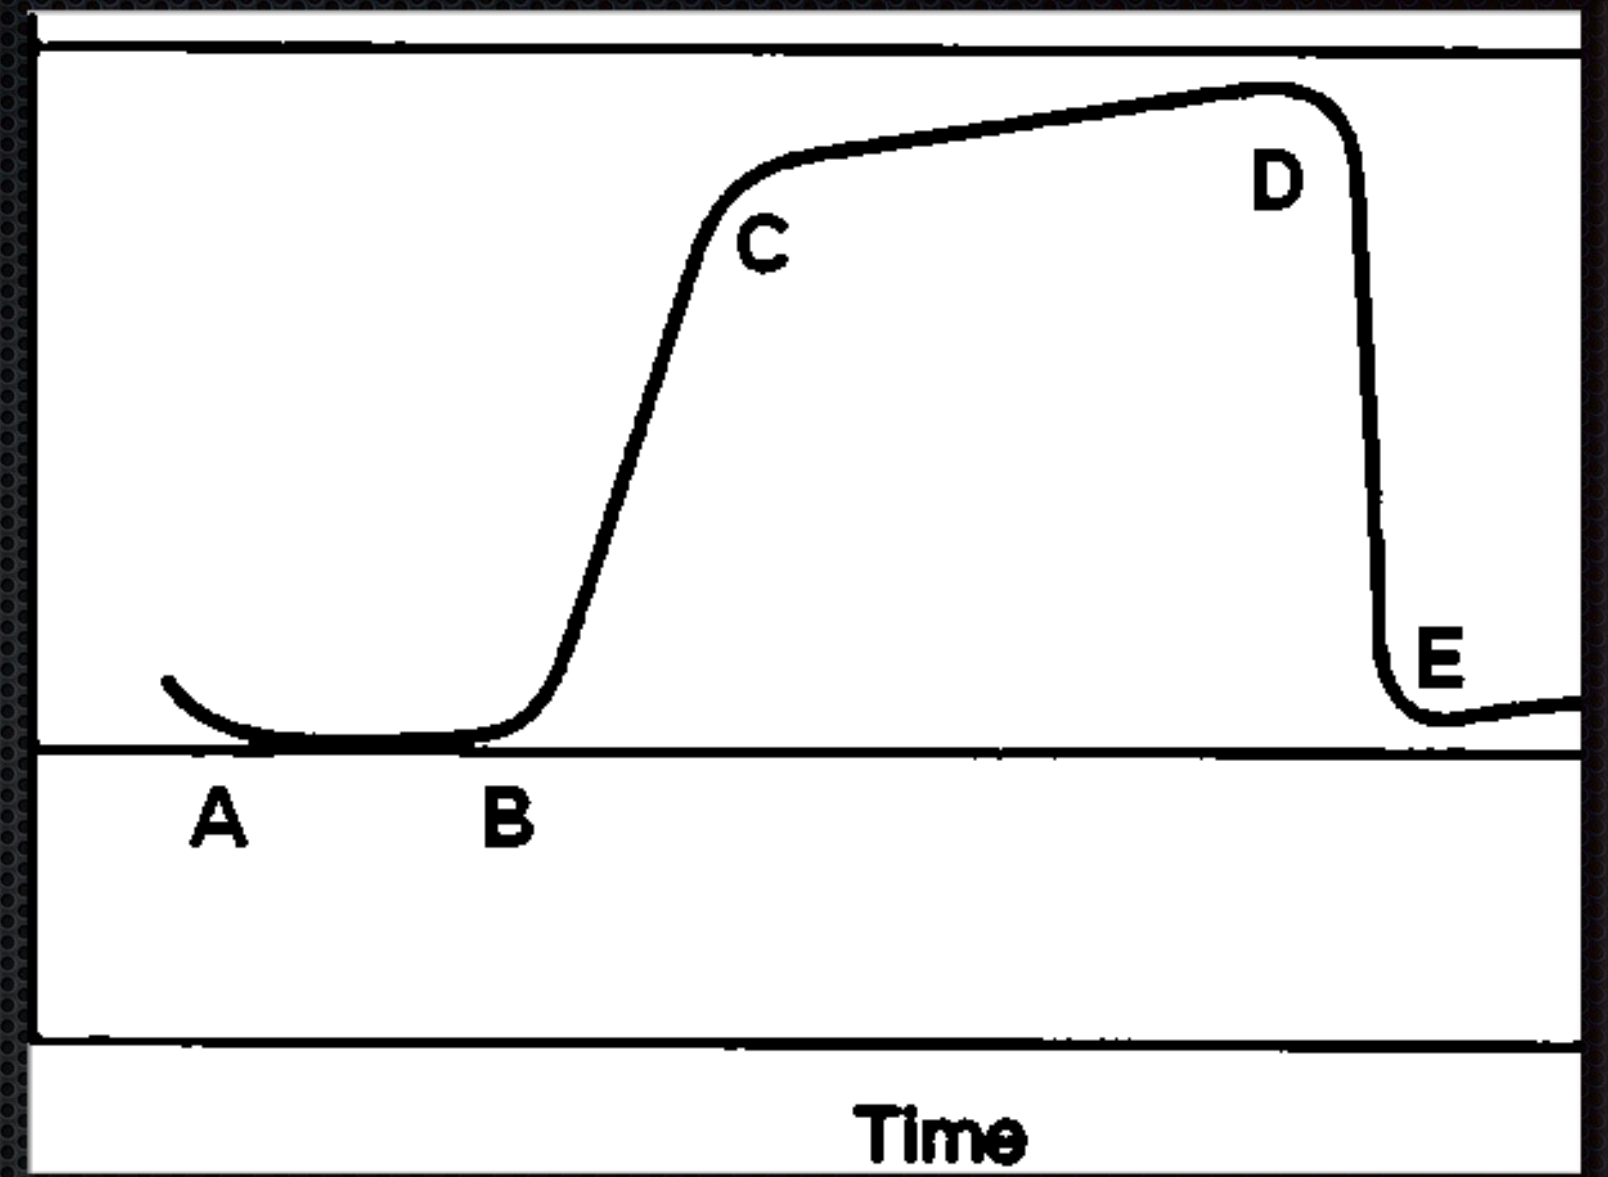

So why do we  
use it?

The bridge of basic science  
to clinical practice

# Guess the pathology

- Pink:
- Hyperventilation

# Guess the pathology

- Green:
- Hypoventilation

# Guess the pathology

- Blue:
- Obstructive pathology

# Guess the pathology

- Impending cardiac collapse?

Going a bridge  
further...

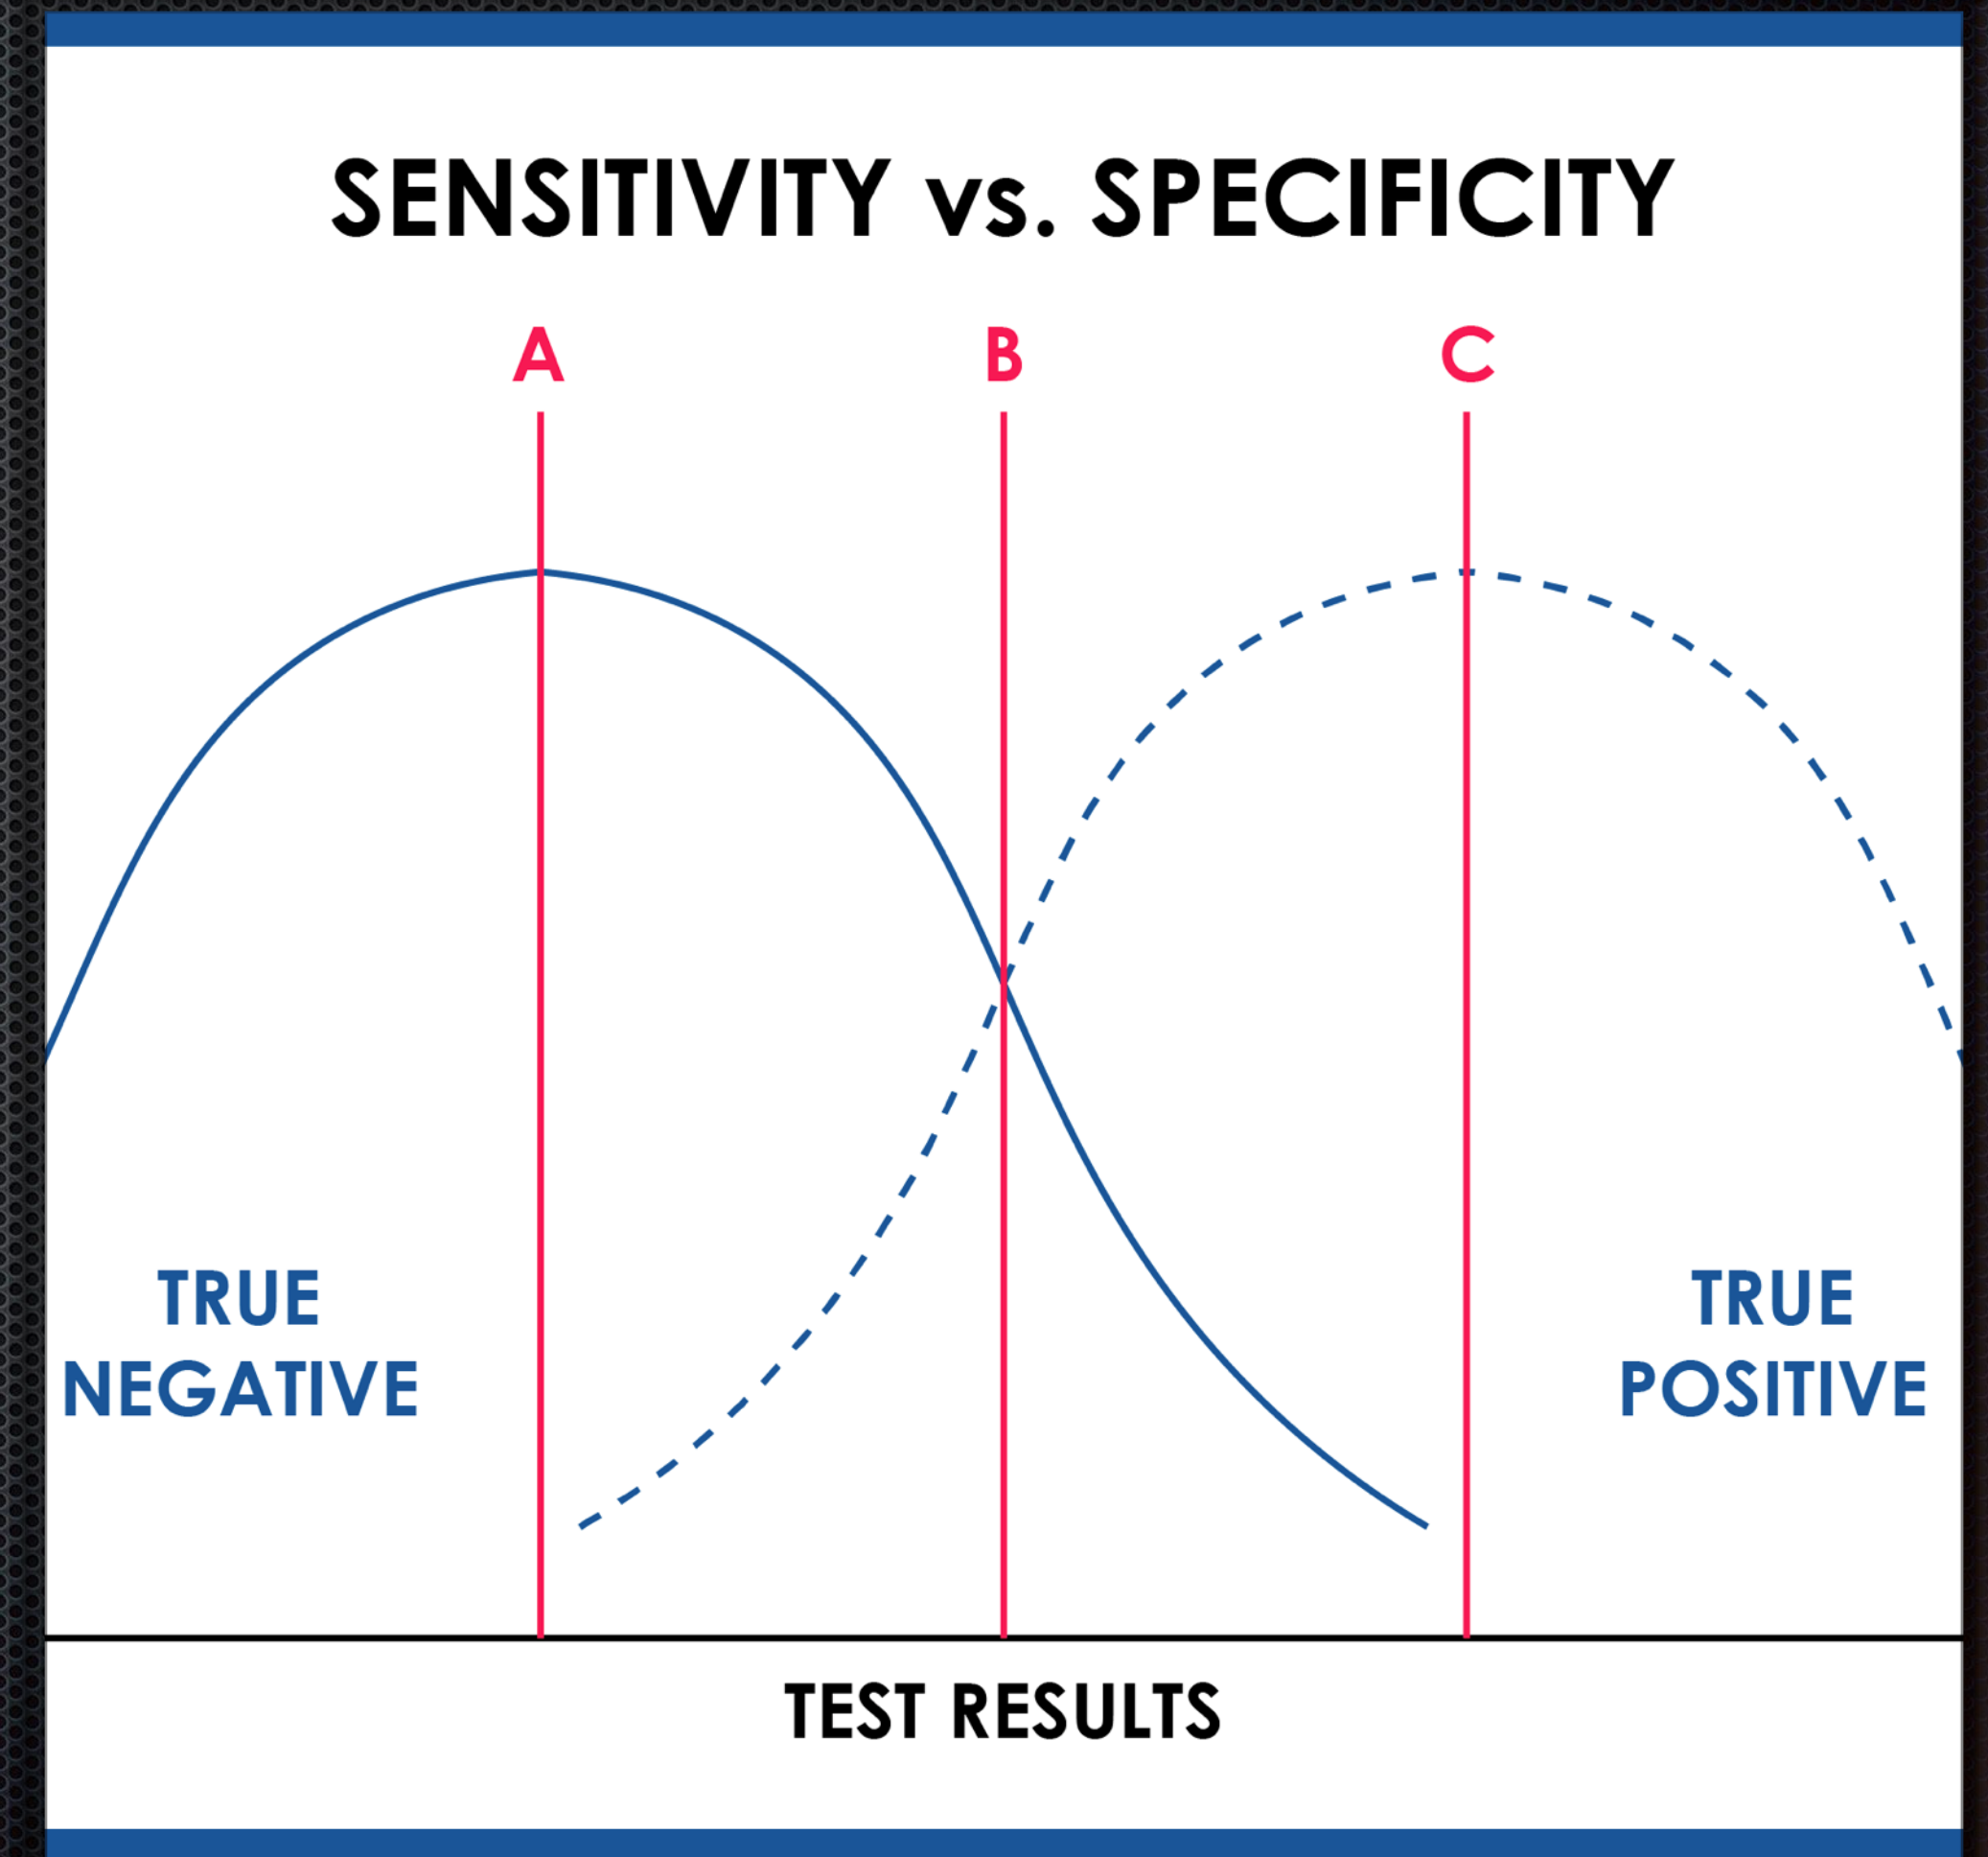

From basic science, to  
clinical, to bleeding edge...

# Sensitivity and Specificity

- What can it catch?
- What can it exclude?

# Can EtCO<sub>2</sub> exclude severe injury?

- NC measurements, first 30 min
- Severe<sup>4</sup>:
  - ICU admission
  - Invasive procedure
  - Transfusion/acute blood loss
  - Clinically significant CT scan
- A cut-off of 30 mmHg<sup>4</sup>

Original Contribution

End-tidal carbon dioxide and occult injury in trauma patients<sup>☆</sup>  
ETCO<sub>2</sub> does not rule out severe injury

Deborah J. Williams, MD<sup>a,\*</sup>, Faheem W. Guirgis, MD<sup>a</sup>, Thomas K. Morrissey, MD, PhD<sup>a</sup>,  
Jennifer Wilkerson, MD<sup>a</sup>, Robert L. Wears, MD, PhD<sup>a</sup>, Colleen Kalynych, EdD<sup>a</sup>,  
Andrew J. Kerwin, MD<sup>b</sup>, Steven A. Godwin, MD<sup>a</sup>

<sup>b</sup> Department of Surgery, Division of Acute Care Surgery, University of Florida, Jacksonville, Jacksonville, FL 32209

# Can EtCO<sub>2</sub> exclude severe injury?

- No. But it can predict poorer outcomes

# Can EtCO<sub>2</sub> predict transfusion need?

- 30 and 35<sup>5</sup>
  - Below 30 - bad
  - Above 35 - better
- Occult shock<sup>5</sup>

End-tidal CO<sub>2</sub> on admission is associated with hemorrhagic shock and predicts the need for massive transfusion as defined by the critical administration threshold: A pilot study<sup>☆</sup>

Melvin E. Stone Jr.<sup>a,b,\*</sup>, Stanley Kalata<sup>b</sup>, Anna Liveris<sup>a</sup>, Zachary Adorno<sup>a</sup>, Shira Yellin<sup>a</sup>, Edward Chao<sup>a,b</sup>, Srinivas H. Reddy<sup>a,b</sup>, Michael Jones<sup>a,b</sup>, Carlos Vargas<sup>a</sup>, Sheldon Teperman<sup>a,b</sup>

<sup>a</sup> Department of Surgery, Jacobi Medical Center Bronx, NY, United States

<sup>b</sup> Albert Einstein College of Medicine, Bronx, NY, United States

# Brush the dust off your capno!

EtCO<sub>2</sub> less than 30 is bad

EtCO<sub>2</sub> greater than 35 is...

EtCO<sub>2</sub> less than 10 is futility

Changing waves - change in patient
