Cyber Security Alert SA09-218A

Apple Updates for Multiple Vulnerabilities

   Original release date: August 06, 2009
   Last revised: --
   Source: US-CERT

Systems Affected

     * Apple Mac OS X versions prior to and including 10.4.11 (Tiger) and 10.5.7
(Leopard)
     * Apple Mac OS X Server versions prior to and including 10.4.11 (Tiger) and
10.5.7 (Leopard)

Overview

   Apple has released Mac OS X v10.5.8 / Security Update 2009-003 to
   correct multiple vulnerabilities affecting Apple Mac OS X and Mac
   OS X Server. Attackers could exploit these vulnerabilities to take
   control of your computer, access your sensitive information, or
   crash your computer.

Solution

   Install the updates

   Use Software Update or Apple Downloads to install updates.

Description

   Apple Mac OS X v10.5.8 / Security Update 2009-003 addresses a
   number of vulnerabilities affecting Apple Mac OS X and Mac OS X
   Server. These updates also address vulnerabilities in other
   vendors' products that ship with Apple Mac OS X or Mac OS X Server.
