

BIOHAZARDOUS AGENTS REQUIRING TTUHSC Institutional Safety Committee (IBC) PROTOCOL REGISTRATION

INSTRUCTIONS: When registering hazardous biological or chemical agents, the IBC Protocol Registration Application form must be completed first. Please contact the IBC administrator in the Research Integrity Office (RIO) for the latest IBC forms in iRIS. For any biological agent found on this list, **Addendum A** of the IBC Registration must also be completed and submitted for review.

DEFINITION: The IBC defines “biohazardous materials” as all infectious organisms (bacteria, fungi, parasites, prions, rickettsiae, viruses) that can cause disease in humans or cause significant environmental or agricultural impact, in addition to all human or non-human primate tissues, fluids, and primary cell lines, all transgenic animals and plants, recombinant DNA, and all natural or genetically-engineered human and animal cell lines that are pathogenic to humans.

CDC/NIH/USDA “select agents” are highlighted in green for quick reference. The federal government decides which agents are at high risk of being used in terrorist activities and refers to them as “select agents”. Select agents can either be pathogens (listed below) or biological toxins. Even though biological toxins are derived from animals and plants, they are included in the highly hazardous chemical list because they have no pathogenic potential. NOTE: All manipulations of select agents at TTUHSC must be in accordance with institutional policy 73.12. You may find the policy at this link: <http://www.ttuhs.edu/HSC/OP/OP73/op7312.pdf>

NOTE: The following list should be used as a reference and does not necessarily reflect ALL BSL-2 and higher agents or materials that require IBC protocol approval.

NOTE: BSL-1 and non-hazardous biological agents will be exempt from IBC protocol registration, as described above. However, a complete inventory list of biologicals must be submitted to the IBC before any use of these materials will be approved.

NOTE: If you are registering for the first time, you should submit a *proposed* biological inventory for the year.

These materials require an approved IBC protocol for possession or use*

HUMAN and non-HUMAN PRIMATE MATERIALS

- Primary cell lines **
- Blood or blood products
- Fluids surrounding internal organs, the joints, or a fetus and semen or vaginal secretions
- Any body fluids contaminated with visible blood
- Any tissues (unfixed)

- * Before possession or use of these materials, investigators must have an IBC-approved protocol and either an approved Institutional Review Board (IRB) protocol or an approved IRB exemption. Contact Sponsored Programs for further information.
- ** BSL-1 materials are exempt. Contact Laboratory Safety Services (743-2597) for other possible exemptions.
