## **WE WELCOME THE INAUGURAL CLASS**

Texas Tech University Health Sciences Center Paul L. Foster School of Medicine will welcome its inaugural class July 13. Forty of the finest students in the nation chose El Paso as their top location to train as tomorrow's doctors.

As the first students to study at the only four-year medical school on the U.S./Mexico border—they'll emerge as leaders in the areas of border and Hispanic health and research.

TTUHSC Paul L. Foster School of Medicine holds a unique position on the border as an unrivaled educational, research and health care opportunity. Understanding Hispanic and border health issues will help scientists better understand the nation as a whole. Biomedical research conducted in El Paso will take on enormous importance and form the base of knowledge our country needs, for today and tomorrow.

Our school's curriculum is consistent with modern scientific principles and stresses the highest ethical standards, combined with the delivery of compassionate, culturally appropriate care consistent with the unique needs of our community.

The TTUHSC Paul L. Foster School of Medicine stands as an example of the work of an entire community.
