

## Program Director

**Hasan Salameh, M.D.**

Residency Program Director  
Assistant Professor  
Division of Nephrology

Dear Interested Applicant:

Welcome to our Texas Tech Internal Medicine El Paso Residency Program! We hope to provide you with plenty of useful information about our program during the interview process today.

Our department has been training physicians since 1971 and we are committed to providing the best education possible to our residents. Our affiliation with University Medical Center, formerly known as Thomason General Hospital, provides residents with an excellent clinical training experience. Our residents receive training in both common and rare diseases in advanced stages not usually found in this country, coupled with a nurturing academic environment. The border city of El Paso is a pleasant, predominantly Hispanic, busy community that offers all the amenities of a large metropolitan city. At the end of the three year residency program our residents have the opportunity of pursuing a fellowship in Cardiology, GI and Nephrology here at TTUHSC El Paso. Several of our graduates have matched in excellent fellowship positions such as: GI and Nephrology at Mayo Clinic in Florida, Cardiology at UT Herman, and Endocrine at Baylor MD Anderson, just to name a few. Our graduates are also well received in primary care positions around the country. The working knowledge of Spanish acquired in our program is definitely an advantageous quality wherever our graduates go in their careers. All of the above reflects our commitment to excellence in the formation of Internal Medicine specialist for the 21<sup>st</sup> century.

Should you desire more detailed information about our program, please visit our web page at [http://elpaso.ttuhsoc.edu/fostersom/internal/residency\\_program.aspx](http://elpaso.ttuhsoc.edu/fostersom/internal/residency_program.aspx).

We hope you consider our program as an attractive option for your residency training.

Sincerely,

Hasan Salameh, M.D.
